Email: nsanchez9009@gmail.com

Mobile: +1 407 619 0125

LinkedIn: linkedin.com/in/nsanchez9009

Full-stack engineer with internships at Amazon and Pinterest. I build AI-powered data tools (natural-language-to-SQL, semantic search, ML risk scoring) and own delivery end to end, from scoping requirements with product and design through production launch and stakeholder demos.

Technical Skills

Languages: TypeScript/JavaScript, Python, Java, C/C++, C#, Rust, SQL, HTML/CSS

Frameworks: React, Next.js, Node.js, Express, Flask, Django, Redux Toolkit, Tailwind

AI & Data: NLP (spaCy), vector search (Pinecone), TensorFlow, ML model integration, PostgreSQL, MySQL, MongoDB, Redis

Cloud & Tooling: AWS (EC2, S3, Lambda, CloudWatch), Docker, Kubernetes, CI/CD, REST/GraphQL, Git, Jest, Pytest, Linux

Delivery & Leadership: Agile/Scrum, sprint planning, requirements scoping, story breakdown, code review, stakeholder demos, cross-functional coordination

Professional Experience

Pinterest — Remote

Full-Stack Software Engineer Intern — *May 2024 - August 2024*

- Owned a merchant-search workspace end to end, from scoping requirements with PMs and support to production launch, pairing a React UI with Python microservices to replace scattered onboarding spreadsheets with one searchable source
- Prototyped an AI assistant that turns plain-English questions into SQL against internal schemas, scoped to the selected merchant, so analysts could pull inventory snapshots without writing queries
- Ran the full delivery lifecycle alongside PMs, design, and support: broke features into stories, handled code reviews, shipped to production, and demoed results to stakeholders
- Helped migrate a legacy monolith to React micro frontends, splitting it into independently releasable pieces so release coordination across teams became far less brittle

Amazon — Seattle, WA

Frontend Software Engineer Intern — *May 2023 - August 2023*

- Delivered a Partner Portal analytics dashboard that ingests millions of daily events and surfaces health signals for business stakeholders
- Refactored React components and added lazy loading, cutting cold-start time enough that field teams stopped falling back to spreadsheets
- Built REST endpoints backed by AWS S3 and CloudWatch to stream metrics in near real time, reducing manual monitoring work for the ops team
- Introduced TypeScript typings and Jest tests that caught regressions earlier and made the team's sprint commitments more predictable

Technical Projects

KnowGap - Academic Analytics Platform (Project Lead): Led a 3-person team through planning, task breakdown, and delivery of a Canvas-integrated dashboard where ML risk scores flag students who need advisor outreach. **Stack:** React, Flask, PostgreSQL, OAuth2, Docker, AWS

YouTube Content Intelligence: Built semantic search across long-form videos using transcript NLP, Pinecone vector search, and caching for fast responses. **Stack:** React, Python, TensorFlow, Pinecone, YouTube API

ShopFlow - E-Commerce: Implemented a marketplace with live inventory sync, Stripe checkout, and operator analytics, load-tested with k6. **Stack:** React, Redux, Node/Express, MongoDB, JWT, Stripe

Education

University of Central Florida — Orlando, FL

Bachelor of Science in Computer Science, GPA: 3.32 — *Graduated August 2025*

- **Coursework:** Data Structures & Algorithms, Software Engineering, Databases, Operating Systems, Machine Learning, System Design. **Honors:** President's Honor Roll (2022, 2023)

Leadership

CyberPatriot XII State Champion (Team Captain): Led a 4-person team through incident response and OS/network hardening to the Florida state title
